

Take a plunge to our archaic reorganization process and remove the blockage

| | |
|-----------------|---|
| Project Title | Take a plunge to our archaic reorganization process and remove the blockage |
| Project Summary | Modernize our outdated reorganization process so it is more fluid and intuitive for our staffing specialists and the stakeholders we support. |
| Country | United States |

Project Description

Our current reorganization process consists of multiple spreadsheets, hard copy templates and MS Word mail merge letters. This project would consist of automating the hard copy template and creating a database or a program to capture the data contained in the multiple spreadsheets in one place. Needs someone with solid MS Access programming skills and Adobe Acrobat to create the form templates. Could be a SharePoint solution as well to keep all the communication in one area. Our agency uses Adobe Dreamweaver CC for webpages so that skill would be a great benefit for this project.

Required Skills or Interests

- Skill(s)
- Data analysis
- Data visualization
- Design thinking
- Software development

Additional Information

Looking for 3 highly skilled students who love a challenge. You will be working as a team and asked to put some serious thought into fixing a challenging program. Your mission, should you accept it, is to elevate this program to the best in the reorg program in the Forest Service.

Language Requirements

None
